The Design Guidelines Update is organized around 3 key questions:

1. **What do we have?**
   Our consultant, Post Oak Preservation Solutions, performed an extensive review of our historic districts to capture Georgetown's historic development patterns, architectural styles and building materials.

2. **What do we love?**
   We asked residents, property owners, and business owners what they love about the historic districts. Historic charm, the vibrancy of Downtown, and the wonderful architectural details were at the top of a very long list!

3. **How do we protect these in the future?**
   The historic districts were established to protect the buildings and character that our community values, and the Design Guidelines Update will continue those protections while responding to direction from City Council and feedback from our community.

---

**Council Direction**

*The City Council requested that we look carefully at key areas in the update process:*

- Commercial infill
- Residential infill (new review requirement)
- Demolition/relocation
- In-kind materials
- Commercial signage
- Consistency with the Unified Development Code

**Stakeholder Feedback**

*In the stakeholder meetings some of the key takeaways were:*

- Design Guidelines are sometimes too vague, but flexibility is needed for creativity
- Better guidance for compatible additions and infill construction
- Our users would benefit from more plain and clear language and better illustrations
- Materials could be considered for their durability as well as their aesthetic quality
- New buildings need architectural details, especially in high-traffic areas
- Signage needs good quality materials and good design

**Consultant Analysis**

*When our consultant reviewed the Design Guidelines they identified strengths as well as areas for improvement. Some of the key areas for improvement included:*

- Organize the document to help users quickly access the information specific to their project
- Reduce repetitive information to streamline the document and reduce confusion
- Clearly separate guidelines for commercial and residential structures
- Provide illustrations and guidance specific to Georgetown and to the variety of architectural styles
- Provide more guidance for building lighting and specific guidance for sign illumination
- Provide clear guidance for compatible site design according to the context.

---

The direction and feedback captured between October 2020 and February 2021 is being incorporated into the draft of the Design Guidelines that will be presented to the community in late April for their review and feedback. We look forward to hearing from you in this next phase of the project!
